

## SKILLSER PRACTICE PACK

# Digital Literacy & Internet Skills

Tech & AI • Beginner • 7 hours

Build a working digital output and explain how you tested it.

### Use this pack beside the course

- Set one observable result for the course.
- Complete the practical activity before marking the lesson complete.
- Keep evidence: screenshots, files, calculations, recordings, photos or finished samples.
- Use the checkpoint feedback to decide what to review.
- Treat the Skillser certificate as proof of course completion, not external accreditation.

# 1. Define your course outcome

Write a result another person could inspect. Avoid goals such as “understand more”. Prefer “I can create / explain / analyse / produce / perform ...”.

## My outcome for Digital Literacy & Internet Skills

---

---

---

---

---

## What I can already do

---

---

---

---

## My constraints

- Time available each week
- Phone-only or limited device access
- Internet/data cost
- Budget for tools or materials
- Confidence or previous experience
- A current rule, platform interface or policy may need verification

## 2. Working principles

Use these principles while you move through the course. They are designed to keep practice connected to a result.

### 1. Define the task and success criteria before choosing a tool.

Write one decision or example from your own context where this principle matters.

---

---

### 2. Create the smallest working version first.

Write one decision or example from your own context where this principle matters.

---

---

### 3. Test with realistic inputs and record failures.

Write one decision or example from your own context where this principle matters.

---

---

### 4. Document setup, assumptions and what you would improve.

Write one decision or example from your own context where this principle matters.

---

---

### 3. Three practical challenges

Do these away from the lesson player. Each challenge should leave evidence you can keep.

#### Challenge 1

**Explain the course topic in your own words without notes.**

What I produced / what happened

---

---

What I would improve next

---

#### Challenge 2

**Create one practical output that someone else can inspect.**

What I produced / what happened

---

---

What I would improve next

---

#### Challenge 3

**Review the result against clear criteria and improve one weak point.**

What I produced / what happened

---

---

What I would improve next

---

## 4. Capstone brief

Build a working digital output and explain how you tested it.

### Capstone output

Create one final output that demonstrates the central skill in **Digital Literacy & Internet Skills**. It should be specific enough for another person to inspect and should include evidence of your process, not only the final result.

### Problem or goal

---

---

---

### Tools / materials / information needed

---

---

---

### Steps and timeline

---

---

---

---

### Evidence I will keep

---

---

---

## 5. Review and next step

Score the work honestly. The purpose is to decide what to practise next.

| Criterion  | 1               | 2            | 3              | 4                  |
|------------|-----------------|--------------|----------------|--------------------|
| Clarity    | Unclear         | Partly clear | Clear          | Very clear         |
| Quality    | Frequent errors | Some errors  | Meets standard | Consistent         |
| Process    | Cannot explain  | Incomplete   | Repeatable     | Adaptable          |
| Evidence   | Little proof    | Some proof   | Clear proof    | Portfolio-ready    |
| Reflection | No review       | General      | Specific       | Tested improvement |

### My next 30-day practice plan
